Reduce Your Cyber Security Risk:
Documentation & Training Reduce Vulnerability

Is your company protected against cyber security risks?

People are the biggest risk when it comes to a company's IT security. Most security breaches occur because of human error. Identifying the risks and addressing vulnerabilities in company processes can help you proactively mitigate the danger of a cyber attack.

Experts who understand your organization's needs can develop comprehensive plans to **meet compliance requirements** and **reduce risk and liability.**

Meet Compliance

There are over 50 statutes for cyber security compliance. Having comprehensive information security policies is not only best practice for reducing risk, but complying with regulations is required for many industries.

Improve Quality

The biggest threat to the security of company data comes from employees. Ensure all employees have security awareness training, know your company policies, and know the procedures for responding to a security incident.

Accelerate Response Time

Experiencing a cyber security breach is not a not a matter of if, but when. Documenting your response plan and data recovery plan — and training employees — are critical steps for minimizing impact.

Increase Revenue

Your customers trust you with their sensitive information. Take a proactive approach to safeguarding their information and enhance your reputation in the process.

Case Studies

Looming Compliance Deadlines

Challenge: Lack of internal resources to document cyber security procedures for preventing and managing cyber attacks

Solution: Comprehensive Cyber Security Plan, Risk Assessment, and Training Program

Outcome: Novatek's deliverables helped client meet compliance deadline

ISO/IEC 27001 Compliance

Challenge: Outdated documentation due to changing regulation

Solution: Full assessment of organization's IT health and security

Outcome: Novatek documented standards, procedures and workflows for ISO/IEC 27001 compliance in the form of a documented IS Management System

Incident Response Plan

Challenge: Undocumented protocols for preventing and managing cyber attacks

Solution: Vulnerability Assessment and Computer Security Incident Response Plan

Outcome: Novatek worked with client to define incident response protocols and created an Incident Response Plan

About Novatek

For over 30 years, Novatek has provided technical documentation and training services. Novatek has the industry expertise, technical communications talent, and strategic guidance to meet risk mitigation and compliance objectives despite time and budget constraints.

Novatek's Cyber Security Documentation & Training Solutions

- Information Security Management System
- Incident Response Plan
- Disaster Recovery Plan
- Cyber Security Awareness Training
